Practice Questions

Page 127, Question 279

A transmission medium commonly used to connect portable medical devices to information systems is:

- a. Cable
- b. Infrared light
- c. Microwave
- d. Radio waves

Answer: D

Rationale: Radio waves and microwaves handle transmissions in a wireless network. This might include Bluetooth or other wireless devices (e.g., mouse, keyboard) (Amatayakul 2013, 303).

Exam 1

Page 13, Question 54

Which national database was created to collect information on the legal actions (both civil and criminal) taken against licensed healthcare providers?

- a. Healthcare Insurance Data Bank
- b. Medicare Protection Database
- c. National Practitioner Data Bank
- d. Healthcare Safety Database

Answer: C

Rationale: The National Practitioner Data Bank was created to collect information on the legal actions (both civil and criminal) taken against licensed healthcare providers (Shaw and Carter 2015, 346–347).
